

Quick Guide

System State

“LP adjusted for inflation”

What is System State Protocol

System State Protocol is a unique market-making solution for decentralized exchange tokens. We use ratio-swapping to outperform traditional DEX token ratios by 100%.

System State Protocol LP formula - $x \cdot y = 2 \cdot k$

Example

A normal DEX will offer \$50 to swap 5000 LOAN tokens and our protocol will offer \$100 to swap 5000 LOAN tokens. We create the volume required for any token to be successful.

Decentralized Autonomus Vaults - DAV

DAV token holders get access to a cluster of tokens

DAV token holders get 1 million State tokens per DAV minted. Special bonus for early adopters.

DAV token holders share 38.2% of daily auction tokens

DAV token holders get exclusive access to daily auctions for a 100% ROI.

DAV token holders get a full refund for minting DAV tokens every 369 days. Conditions apply

Inflation Banks

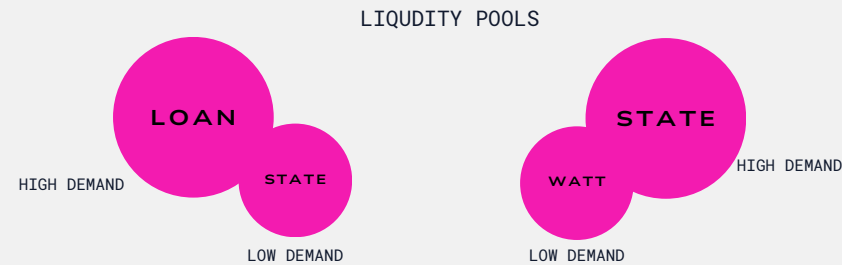

System State

Mint DAV tokens

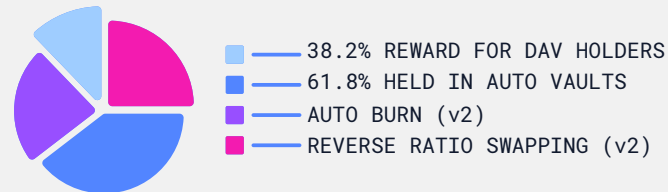

- MINT DAV TOKENS TO CREATE VAULTS
- MINTERS GET ACCESS TO DAILY AUCTIONS
- DAV TOKENS ARE NOT TRADEABLE

Auctions

- AUCTION ACQUIRE TOKENS FOR INFLATION BANKS.
- SYSTEM STATE PAYS 100% HIGHER RATIOS / PRICES THAN A NORMAL DEX.
- AUCTIONS ARE TARGETED AT THE TOKENS IN THE LP WITH LOW DEMAND

Inflation Banks

- KEEP TOKENS OFF THE MARKET AND CREATE A PRICE APPRECIATION MECHANISM
- AUTO VAULTS / AUTO BURNS - MANAGE SUPPLY AND DEMAND OF EACH LISTED TOKEN
